Annual Report

on SDG 6 Clean Water and Sanitation

6.5 Water in the community

6.5.6 Does your university as a body actively promote conscious water usage on campus?

Thaksin University promotes conscious water use through its Green University Policy, water-management information, low-water-use landscaping, and free drinking-water refill points. The policy provides an institutional basis for managing water responsibly on university grounds. Thaksin University also uses low-water-use landscaping to reduce the amount of water needed for grounds maintenance. The photograph below shows this practice on University grounds.

Figure 1: Low-water-use landscaping at Thaksin University

Thaksin University promotes conscious water use through information on campus water management and access to free drinking-water refill points. In its public report dated 9 October 2025, the University described its water supply system and stated that it promotes the responsible use of water. The report also explains that water quality is monitored during production and distribution by the University's Water Quality Analysis Laboratory.

Figure 2: Water-supply system and water-management

The University also provides free drinking-water refill points for students and staff. A University report describes refill and drinking-water services across its grounds, including locations in academic buildings, offices, dormitories, and dining areas. It states that the service helps reduce the use of single-use plastic bottles. The report describes several types of drinking-water points, including water dispensers and filtration units.

Figure 3: University information and photographs showing free drinking-water refill points

The University's public information therefore documents two relevant measures: promoting responsible water use as part of campus water management, and providing drinking-water refill points that support water access and reduce reliance on single-use bottles. The report gives examples of buildings and service locations, while the 2025 report provides more recent information on the University's water-management approach.

Figure 4: Water-saving campaign jointly organized by the Provincial Waterworks Authority Region 5 and Thaksin University

Thaksin University students joined a water-saving campaign organized with the Provincial Waterworks Authority Region 5. The campaign promoted water conservation through the 3 Rs: Reduce, Reuse and Recycle. This is earlier evidence of the University's water-awareness activities.
